In recent years, small and medium enterprises have used to keep records of their daily inclinations manually. Due to the progressive accretion of business and curtailment of time, most industries are now converging on automation. This can save substantial time and drastically enhance the accuracy. According to the US Chamber Of Commerce, 2020, 84 percent of small enterprises provide their consumers with at least one kind of digital technology, and 80% of companies utilize one marketing and advertising internet platform. These data can easily give us a visual of the constraint of ERP in SME sectors.

What we did:

"**Amar Bebsha Limited**" is a preeminent IT company in Bangladesh, working on software development, ERP solutions, digital marketing, etc. Our business analysts have identified the essentiality of automated software that can promptly solve the inventory, account transactions, sales and generate associated reports. So, our complete ERP solution software suffices all the requirements that a small/medium enterpriser may need and fully indulges our customers, diminishes their long-term nuisances, and conserves time. Our developers developed the best ERP software from the aspect of a newbie user. They kept all the interfaces as eye-catching and neat as possible. We hope to deliver an extraordinary experience through this innovation.

So what is ERP? An ERP software compiles and consolidates the workflow of a particular organization by making the processings automatic.

Our alphabetized ERP Software passes all the principles of a perfect SME Software. This software concedes multi-level login, and it was designed based on the multi-dimensional tenacities an enterprise can encounter. We tested this product several times with clear documentation. We maintained the software development life cycle phase so that the latest build remains stable, fast, and bug-free.

How does it work?

The software operates on a base input-output strategy. The user can input, edit or delete data. The software concocts the data as per its needs and generates a report. Users can also upload a file instead of direct input, quote where required, and download the reports in numerous formats. Our SME software is mainly intended to automate every sector of an enterprise.

Major Features and Benefits of ERP:

Glassiness: Our ERP software grasps all the detailed records by differential rubrics and calculates the exact and complex. This will help the enterprise to manage their belongings and transactions more explicitly.

Time-saving: Our automated software acquires all types of customized input and lookalike calculations. The input forms are instituted in a way that minimizes the input time and maximizes output.

Account management: The software is encumbered with an account management system. Account management is one of the most significant issues of the industry. Our accounting ERP software can generate different types of vouchers, print or save them in other formats. It also can cause a relevant report of the actions. The embedded account management system has mutable roles and a calculation adjustment system to complete the whole account cycle.

Summary: The software surfaces with a detailed dashboard that visually summarizes all the transactions, events, new profiles, etc.

Report Visualization: Every action the super admin makes is stored in our database and resembles while generating a report. Every module has a dedicated report engendering system that removes the awful experience of looking at raw data.

Extensive Search: An exclusive search method is bound with the system to search on any criteria. This includes date search, name search, ID wise search or combined search.

Streamlined Data Flow: The system's data structure works to unite all the operations to make the experience smoother and faster.

Reduce Operational Costs: Our software is designed to be handled by one person efficiently. We keep the interface light and informative so that the operator knows what he is doing. This will drastically remove the operational costs by removing the manual input and unnecessary workforce.

Easy Configuration: We conjecture our customers want their customized look and flexible appearance. Here at "**Amar Bebsha Limited**," our distinctive developers kept all the features tact and variable. We designed an easy configuration system that helps our users to customize the software as per their minds.

Update and Flexibility:

Our ERP software will get perpetual support and update as soon as our developers build one. An enterprise solution indeed requires constant technological change and appearance polishment. Keeping this in mind, we have designed our product to be updated or customized flexibly. Instead of hardcoding, we have dynamically set the functionalities and modules. This enriches user versatility. Our customer support service is always online to receive any complain and trigger subsequently. Future updates will keep our product parallel to the modern technology and requirements. Any security breach or bugs will be solved instantly by a patch update.

Customer Requirement:

We initially built the software based on the interpretation of customer requirements. An SME software should impersonate an all-rounder role in the industry and must serve all the needs. Still, we are welcoming to any modifications and configuration variations to our module. At "**Amar Bebsha Limited,**" customers are our main priority, and we thrive to serve them uninterruptedly.

After many investigations and further studies, we can say that our ERP Software is the best ERP software in Bangladesh. For more information, user guide, and related documentation, visit our website or send us queries.
